

## ***IPRCC 30 Second Illegal Streaming PSA***

I'm Steve Francis with the National Intellectual Property Rights Coordination Center.

We're all staying home more often, so the demand for entertainment is high. Criminals are taking advantage of that demand by offering illegal services that provide movies, TV shows and live programming.

But there's a catch—these illegal services can deliver malware that enables hackers to steal your credit card information, your bank passwords and even your identity.

Don't be a victim. Stream safely from legitimate sources. For more information, visit the National Intellectual Property Rights Coordination Center website or [streamsafely.com](https://streamsafely.com).
